

SCS slug pelleter trials work

£230 per machine to include 1 pellet type at 2 widths (with a single disc often 12m and widest and with a twin disc 24m and widest).

Extra width £30

We require minimum 20kg of product per machine to give sufficient flow to obtain an accurate setting. This amount will cover 1-2 widths. For 3+ widths we require an additional 10kg per width, so for 3 widths through one machine minimum amount is 30kg.

Testing widths

Most common widths we test at in the UK- 12m, 24m, and up to 36m

Some of our machines can test to wider widths; please let us know your requirements.

We have the following machines on site:

Bullock Delimb T24

Logic EBC-TFS80P

Spaldings Lehner Super Vario

Stocks Fan Jet Pro 65

Stocks Fan Jet Duo

If there is a specific machine not listed here that you would like settings for we will endeavour to source one. We also have a range of fertiliser spreaders on site which can be used for slug pellet spreading, please let us know your requirements.

Pellet integrity trials

Please speak to us to discuss your requirements for assessing pellet integrity.
